Education

New York University New York, NY

Bachelor of Science in Computer Science *Graduated Dec. 2024*

- Relevant Coursework: Artificial Intelligence, Software Engineering, Applied Internet Technologies, Data Structures, Algorithms, Linear Algebra
- Involvement: Academic Achievement Program, Girls Who Code, Latinos Unidos Con Honor y Amistad

Experience

Software Engineer Intern, Business Intelligence Feb. 2026 – Present

Inter Miami CF *Miami, FL*

- Independently refactored a PHP partnership-management platform from a flat, duplicated codebase into an MVC architecture (custom Controllers/Models/Services/Views), reducing redundant logic across core modules
- Led development of a full-stack Events tracker feature – PHP backend, MySQL schema, REST-style API endpoints, jQuery/JS frontend – covering venue management, event tracking, and role-based access, coordinating with one other developer
- Integrated Cloudflare R2 object storage into the platform for asset images in the assets manager and secure contract/file storage for activation tasks tied to contracted packages
- Built an admin dashboard with live system-health monitoring and KPI reporting, querying MySQL to surface season-scoped metrics for leadership

Software Engineer Intern May 2025 – Nov. 2025

One Community Global *San Gabriel, CA (Remote)*

- Built 7+ production React components for a workforce-management dashboard, shipping two new data-visualization features (a labor-hours distribution pie chart and an expenditure/financials tracking card) and a Promotion Eligibility table with live API data fetching
- Led a systematic migration of legacy global CSS to CSS Modules across 5+ dashboard chart components and added dark mode support, reducing style conflicts and improving long-term maintainability
- Designed a consensus-based voting feature in Figma, from concept through user workflows and interactive prototypes, to guide upcoming platform development
- Reviewed 20+ pull requests across frontend and backend repositories, providing feedback on code quality and correctness

Projects

American Sign Language Interpreter | *Python, Flask, HTML/CSS, MongoDB, Docker* Nov. 2024

- Built an ASL interpretation platform that uses machine learning and OpenCV to recognize hand gestures through a live camera feed and translate them into real time outputs
- Implemented a Flask based backend that supports smooth communication between the recognition model and the user interface
- Containerized the full application with Docker to simplify deployment and maintain consistent environments for development and testing

Facial Attendance System | *Python, OpenCV, Flask, SQLite* Apr. 2024

- Built a real-time facial attendance system in Python using OpenCV for face detection and the face recognition library for encoding and identification
- Built REST API endpoints and responsive web dashboards for data viewing and management
- Tested on a class of 100 students and reduced attendance-taking time by 80%, demonstrating scalability and real-world applicability

Technical Skills

Languages: Java, JavaScript, Python, PHP, SQL
Frameworks & Libraries: React, Next.js, Node.js, Express, Flask, jQuery, TailwindCSS
Tools & Platforms: Git, GitHub Actions (CI/CD), Docker, Cloudflare R2, Vercel, Figma, MVC Architecture, REST APIs
